

MISYS HEALTHCARE SYSTEMS LICENSES CIC'S HANDWRITING AND E-SIGNATURE TECHNOLOGIES

CIC & Misys Provide Physicians Convenience and Security with Integrated Solution

Redwood Shores, CA, and Raleigh, NC, March 24, 2003- (OTC BB:CICI) Communication Intelligence Corporation ("CIC"), the leader in electronic signature, biometric verification and natural input solutions, and Misys Healthcare Systems, a market leader in healthcare information technology, announced today a licensing agreement to integrate CIC's InkTools®' handwriting and e-signature capabilities into Misys' market-leading Electronic Medical Records (EMR) solution.

This solution, Misys EMR™, is a flexible, adaptable EMR system that works the way a physician practice needs it to work. The product provides electronic capabilities for routine tasks - such as transcription, imaging, orders management, messaging and prescription writing - as well as a point-of-care solution for physicians in the examination room.

"By establishing a direct relationship with CIC we can better serve our customers with the added "point-of-care" functionality Inktools makes possible in our EMR application suite," said Shelley Newman, CEO, Misys Healthcare System's Physician Systems business unit. "CIC's InkTools allows Misys EMR to capture a physician's signature, DEA, and LIC numbers and apply them on prescriptions. It also enables our product to capture a user's freehand writings and insert them into the patient's clinical chart."

"Our partnership with Misys Healthcare and their EMR application delivers a winning combination of simplicity, acceptance and significant savings for doctors and their patients," stated Guido DiGregorio, Chairman and CEO for CIC. "Our relationship with Misys will aid CIC in better understanding the needs and requirements within the healthcare industry insuring that we continue to deliver best-of-breed solutions for these users."

InkTools is a high performance SDK for implementing systems using electronic ink, handwriting recognition or handwritten signatures. InkTools provides electronic ink capture and display, biometric signature verification and ink compression as well as other encryption and hashing algorithms that add value to a wide variety of document and transaction based applications.
