

PHYSICIAN WEBLINK LICENSES CIC'S ELECTRONIC INK AND HANDWRITTEN SIGNATURES FOR PEN-BASED MOBILE COMPUTER

Redwood Shores, CA, July 7, 2000 - (Nasdaq: CICI) Communication Intelligence Corporation ("CIC"), the leading supplier of natural input and electronic signature solutions, announced today that it has entered into a joint development and licensing agreement with Physician WebLink to provide InkTools™, CIC's e-signature software development kit, for use within Physician WebLink's EncounterLink™, a pen-based point of care wireless device.

Betty Smith, Vice President of Product Development and Technical Services for Physician WebLink stated, "Our collaboration has allowed us to develop a compelling wireless device for use in the health care industry. CIC's InkTools which were used in developing EncounterLink gives physicians a familiar and easy way to enter patient information into electronic forms and mark up or draw a chart. The same tools are used to collect the physician's signature to authorize additional medical care or lab work and the patient or guardian's signature in cases of immunization. Physicians and back office staff also utilize electronic ink to write quick chart notes and messages to others in the office."

Jeff Sandler, Vice President of Marketing and Enterprise Business Development for CIC commented, "We are pleased to join in this alliance with Physician WebLink to develop the model for future offerings for the health care industry. This combination will set the standard for ease of use and patient security."

EncounterLink is Physician WebLink's point-of-care connectivity solution, enabling physicians to electronically capture and store patient specific clinical information, as well as transmit and receive prescription, lab and other clinical data. The product enables physicians to enhance the quality and cost-effectiveness of health care at its most critical delivery point-in the exam room. EncounterLink is wireless and mobile, thus highly adaptable to physician workflow. The technology is also internet-based, supporting external connectivity and clinical data exchange functionality with other key health care participants.

InkTools is a high performance Windows software developers' kit for implementing systems using electronic ink or electronic signatures. InkTools provides electronic ink capture and display, signature verification and ink compression as well as other algorithms that can add value to a wide variety of document and transaction based applications.

About CIC

Communication Intelligence Corporation (CIC) is the leading supplier of natural input and electronic signature solutions for wireless Internet and e-Commerce applications. The Company's core software technologies include multilingual handwriting recognition

systems, dynamic signature verification, natural messaging, and operating system extensions that enable pen input. CIC's products are designed to increase the ease of use, functionality, and security of wireless electronic devices ranging from handheld companions to cellular phones. Key licensees of the Company's technologies include Ericsson, Fujitsu, Hitachi, Mitsubishi, National Semiconductor and Symbian. CIC is headquartered in Redwood Shores, California and has a joint venture, CICC, in Nanjing, China. For more information, please visit our website at www.cic.com.

About Physician WebLink

Physician WebLink is an e-health services provider, bringing best of class connectivity and clinical applications to health care providers and health plans. EncounterLink™ is Physician WebLink's point-of-care connectivity solution, which enables physicians to electronically capture and store patient specific clinical information, and transmit and receive prescription, lab and other clinical data. PracticeLink and WellLink™ are the company's Internet portals connecting key health care participants including providers, health plans and consumers. Physician WebLink was formed in March 2000 through the merger of Telesis Medical Management and Vectis Corporation. The company has over 750 employees, and provides a diverse set of products and services including the company's connectivity products, clinical applications, and management services. For more information please visit our website at www.physicianweblink.com.
